☐ the entire international application

☒ claims Nos: 1 to 5, 50 to 53, 79 to 81 (all in part)

**Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement****1. Statement**

Novelty (N)	Claims 6 to 27, 54, 58	YES
	Claims 1 to 5, 28 to 53, 55 to 57, 59 to 83	NO
Inventive step (IS)	Claims 6 to 27, 54, 58	YES

**2. Citations and explanations (Rule 70.7)**

The following citations are referred to in this report:

D1 WO 2003/032921

D2 WO 2001/018171

D3 Peptide Science, 1998, 35<sup>th</sup>, pp. 181-184

D1 and D2 disclose histone deacetylase inhibitors corresponding to the present compounds in which Z is methylene. D3 discloses the compound Ac-L-Asu(NHOH)-NHBzl. The citations further disclose the use of such compounds in treating cancers. Specific compounds disclosed in these citations have been excluded from the present claims by proviso. However the citations provide an enabling disclosure of a broad genus that is encompassed by the present claims and their use as anti-cancer agents, so that the exclusion of specific compound does not necessarily confer novelty and inventive step. Accordingly Claims 1 to 5, 28 to 53, 55 to 57, 59 to 83 lack novelty and inventive step.

However there is no disclosure of compounds having Z as a sulphur atom. Accordingly Claims 6 to 27, 54 and 58 are novel and inventive.

The claims are considered industrially applicable in view of the purported pharmaceutical activity of the compounds.

**Box No. VI**      **Certain documents cited****1. Certain published documents (Rule 70.10)**

(PX) D4 WO 2004/089293	21/10/2004	01/04/2004	01/04/2003

D4 discloses histone deacetylase inhibitors corresponding to the present compounds in which Z is methylene and in which one of Y and XR7 includes a benzyl, quinoliny1 or isoquinolyl group. The compounds may be used in the treatment of cancer. This renders present claims 1 to 5, 28 to 53, 55 to 57, 59 to 83 lacking in novelty for similar reasons to those in relation to D1 and D2.

**2. Non-written disclosures (Rule 70.9)**Kind of non-written disclosureDate of non-written disclosure

referring to non-written disclosure  
(day/month/year)

**Box No. VIII** Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claims 1 to 5, 50 to 53 and 79 to 81 lack full support. In particular, these claims include the definition of R1 as a linker group whilst the specification only provides adequate support for the use of alkyl linking groups, and also include the definition of M as a zinc-binding group, whilst the specification only provides support for hydroxaminc acid groups in this position.

Claim 28 defines the radicals R2 and R3, but these are not given in the formula. It appears that they were intended to be substituents on the hydroxamate group.
